

KICKSTART YOUR CONSERVATION

Simple Ways to Save Water

Keep It Tight

Fix leaky faucets, pipes and hoses. Even a small drip can waste several gallons per day.

Load It Up

Full dishwasher and washing machine loads save anywhere from 5 to 45 gallons per cycle.

Go Low-Flow

Install low-flow toilets and showerheads. Flushing alone can exceed 30 gallons per day.

Use Your Shower Power

Keep showers under five minutes or switch to a low-flow showerhead.

Turn Off the Tap

Turn off water while brushing your teeth or shaving.

Don't Drain It

Capture water while waiting for the tap to heat up and reuse it for plants or cleaning.

Choose Water-Wise Plants

Swap thirsty lawns for California-friendly and native plants.

Let It Grow

Set mower blades to 2–3 inches. Taller grass shades soil and improves moisture retention.

Get Smart About Irrigation

Use weather-based irrigation controllers to water only when needed.

Put a Lid On It

Pool covers reduce evaporation and save thousands of gallons each year.

Explore Your Rebate Options

Rebate and incentive programs offer cash back in exchange for your investments in conservation and sustainability. Check with your local water provider or visit regional programs like BeWaterWise to see what's available in your area.

Turf Replacement Program

Replace grass lawns with drought-tolerant landscaping.

High-Efficiency Washing Machines

Reduce water and energy use with certified high-efficiency models.

Smart Water Monitors

Track water use in real time and quickly identify leaks.

Rotating Sprinkler Nozzle

Use rotating nozzles that allow soil to absorb water more efficiently.

Weather-Based Irrigation Controllers

Automatically adjust watering schedules based on weather.

Rain Barrels and Cisterns

Collect and reuse rainwater for watering lawns and gardens.

High-Efficiency Toilets

Reduce indoor water use with efficient flushing systems.
